Cold agglutinins are autoantibodies produced by a person's immune system that mistakenly target red blood cells (RBCs). They cause RBCs to clump together when a person is exposed to cold temperatures and increase the likelihood that the affected RBCs will be destroyed by the body. Levetiracetam is a drug that is used to treat certain seizure disorders such as: juvenile myoclonic epilepsy, temporal lobe epilepsy, complex partial seizures, myoclonic seizures, refractory seizures, secondarily generalized seizures, simple partial seizures, tonic-clonic seizures. The drug is prescribed as a secondary (adjunctive) treatment in combination with other antiepileptic drugs. Buy and sell surplus LABORATORY equipment.
