

# Download Net Gain In Construction

Biodiversity Net Gain is development that leaves biodiversity in a better state than before. In partnership with both CIRIA and CIEEM, we have developed principles and guidance to help professionals and UK industry address this challenge. Overview. We are seeking views on how we can improve the planning system in England to protect the environment (biodiversity net gain) and build places to live and work. CIEEM, CIRIA and IEMA have jointly published guidance on Biodiversity Net Gain for UK construction and developments. Biodiversity Net Gain is development that leaves biodiversity in a better state than before. DC Strategies works with facilities owners and AEC professionals to develop information support for the building process, from strategic planning through facilities management
