Psychology of Computer Use (Computers and People) n Edition by Author Unknown (Author) Be the first to review this item Psychology Meets Computers. But it's people who create the computer applications and people who use the applications. And in order for computers to be useful, programs and applications need to be intuitive and easy to use. Have you ever been frustrated trying to figure out how to use an app on your cell phone or, conversely,... Psychology, like many academic fields in the social sciences, relies very heavily on the use of computers. Computers are important in providing psychologists with the tools and capabilities to study the human mind and human behavior. They are necessary to expand psychological research and are present in almost all aspects of psychological practice. There are only two fields that really rely on "formal" psychology: human-computer interaction (HCI) and software engineering. Both of these fields consistently rely on psychology research and use research methods developed by psychologists. (The user studies and experiments run by HCI researchers are...
